

Client Brief - Alex Morgan Developer Portfolio

Fictitious client brief created for the Noroff Agency 2 individual assignment.

Client

Alex Morgan is a front-end developer with an interest in gaming, digital products and modern user interfaces.

Project Goal

- Create a modern developer portfolio that presents Alex's skills, projects and professional profile in a clear and credible way.
- The portfolio should help Alex attract job opportunities, freelance work and potential collaborations.

Target Audience

- Recruiters and hiring managers
- Technology companies
- Digital agencies
- Potential freelance clients
- Other developers and collaborators

Visual Direction

- Dark, modern interface with strong contrast.
- Use one purple accent colour throughout the design.
- Clean typography, clear spacing and reusable cards.
- Subtle transitions and interaction states.
- The design should feel professional but not overly corporate.

Required Page Structure

- Single-page portfolio with navigation to the main sections.
- Hero
- About
- Skills
- Projects
- Contact
- Footer

Hero Requirements

- Developer name and role.
- Short introduction.

- Availability status.
- Profile image.
- Clear calls to action for projects and contact.

About Requirements

- Short professional biography.
- Information about Alex's development interests and working style.
- A small set of focus areas or topics.
- Profile image.

Skills Requirements

- Display the main technologies and tools Alex works with.
- Each skill should include a name, category or short description, and an icon.
- Skills should be easy to update through the CMS.

Projects Requirements

- Show selected portfolio projects using reusable project cards.
- Each project should include a title, description, image and technologies used.
- Support optional Live Demo and GitHub links.
- Project content should be manageable through the CMS.

Contact Requirements

- Include email and professional profile information.
- Show whether Alex is currently available for work.
- The contact content should be editable through the CMS.

CMS Requirements

- Use a headless CMS to manage the portfolio content.
- The CMS should manage Hero, About, Skills, Projects and Contact content.
- Images should also be managed through the CMS.
- The website should update when published CMS content changes.

Responsive Requirements

- The portfolio must work well on desktop, tablet and mobile.
- The layout should adapt without losing readability or hierarchy.
- Navigation and project/skill grids should be usable on smaller screens.

Technical Direction

- Build the front end using React.
- Use Sanity as the headless CMS.

- Keep the component and content structure reusable and scalable.
- Use GitHub for version control and project planning.
- Deploy the finished portfolio to a public hosting service.

Client approval direction: the final solution should prioritise a clean, modern presentation and make it easy for the client to maintain content without editing the React code.
